1. Acknowledgment

I would like to express my sincere gratitude to everyone who supported and guided me during my internship Bitkhanan IT Solutions. A special word of thanks goes to my faculty guide, Ms. Twinkal S Panchal, for her exceptional guidance and unwavering support. Her polite, approachable, and friendly nature made it incredibly easy to reach out with questions. I am deeply thankful for her patience and constant willingness to help me navigate my tasks and clear my doubts, which made the academic side of this internship a truly wonderful learning experience. I am equally profoundly thankful to my industry supervisor, Mr. Ankit Dharsandiya. His humble, friendly, and understanding demeanor created an incredibly welcoming work environment. I deeply appreciate his flexibility and support regarding my schedule, and most importantly, his inclusive and respectful attitude. He consistently treated me as a valued team member rather than just an intern, which greatly enriched my practical experience.

Certificate

This is to certify that Ms. / Mr. MOVALIYA PRINCE CHATURBHAI of Third Year has successfully completed the On-the-Job Training (OJT) / Internship for the program Bachelor of Computer Applications conducted by BITKHANAN IT SOLUTION and facilitated by Sutex Bank College of Computer Applications & Science from 05/12/2025 to 31/01/2026 at 510, Kyros Business Center, Sarthana Jakatnaka, Surat-395006 (Email: bitkhanan@gmail.com). It was conducted during the academic year 2025-26.

We wish him/her all the best for all future endeavors.

Roll No: 476

Exam No: 6266

External Examiner : _____

To be used for academic certification only.

3. Declaration

I hereby declare that the internship report is an authentic record of the original work carried out by me during my internship at Bitkhanan IT Solutions . This work was completed under the esteemed guidance of my industry supervisor, Mr. Ankit Dharsandiya, and my faculty mentor, Ms.Twinkal S Panchal. I further declare that this report is being submitted solely for academic purposes in partial fulfillment of the requirements for the bachelor of computer application program at Sutex bank college of computer application and science. The contents of this report have not been submitted previously, in whole or in part, to any other university or institution for the award of any degree, diploma, or fellowship.

Date: 31 January 2026

Place: Surat

Movaliya Prince Chaturbhai

Roll Number: 476

4. Internship Details

A. Name and Address of Organisation: 510, Kyros Business Center,
Sarhana Jakatnaka, Surat-395006

B. Nature of Business/Services: IT Services and IT Consulting

C. Department/Team worked in: IT Department.

D. Name and Designation of Industry Supervisor: Mr.Ankit Dharsandiya,
Supervisor

5. Objectives of Internship

1. The primary objective of this internship was to gain practical knowledge and hands-on experience in modern web development using **React.js**. The aim was to bridge the gap between theoretical **concepts** and **real-world application** by working on **live project scenarios** and **understanding how frontend applications** are built and managed in the industry
2. Another important objective was to develop a strong understanding of React.js fundamentals, including **JSX, functional components, props, state management, and React Hooks**. This helped in building dynamic and interactive user interfaces and understanding how modern web applications function efficiently.
3. The internship also focused on implementing a component-based architecture by dividing the user interface into smaller reusable components such as headers, footers, navigation bars, and product cards. This approach improves code reusability, maintainability, and scalability of the application.
4. The internship aimed to develop dynamic user interfaces by rendering data efficiently and handling user interactions effectively. This included displaying products, updating UI components based on user actions, and managing application state. To learn how to set up a React.js development environment using tools such as Node.js, npm, and VS Code.
5. A major objective was to build real-world features such as product listing systems, wishlist functionality, and shopping cart management. These features helped in understanding how e-commerce applications work in real-life scenarios.
6. The internship also focused on implementing business logic such as price calculation, discount offers like Buy One Get One Free, and cart total management. This enhanced understanding of application logic and user experience.
7. Another key objective was to ensure responsive design so that the application works properly across different devices such as mobile phones, tablets, and desktops using modern CSS techniques.

8. The internship also aimed to understand data management using browser local storage to store and retrieve user data, ensuring persistence even after refreshing the application.

9. Improving debugging and testing skills was another important objective, which involved identifying errors, fixing bugs, and optimizing application performance for better efficiency.

10. Finally, the internship aimed to enhance problem-solving skills and provide real-world development experience by working on a complete React-based application, preparing for future roles in frontend or full-stack development.

6. Description of Work Done

- During the internship period, the primary task was to develop a modern web application using React.js. The work began with understanding the overall project requirements and analyzing how a real-world web application is structured. This initial phase helped in building a clear understanding of the workflow and planning the development process effectively.
- The first step involved studying the structure of a static HTML template, which included multiple pages such as the home page, product listing page, product details page, and cart page. The HTML, CSS, and JavaScript files were carefully analyzed to understand the layout, design patterns, and user interface elements used in the template.
- Client-side routing was implemented using **React Router** to enable smooth navigation between different pages without reloading the browser. Routes were created for pages such as Home, Shop, Cart, and Wishlist, making the application function as a single-page application.
- A dynamic product listing system was developed to display various products in a structured layout. Product card components were created to show product images, names, and prices. The data was rendered dynamically, allowing easy updates and better user interaction.
- Several user interface enhancements were implemented to improve the overall user experience. This included adding hover effects, animations, and responsive layouts. The design was optimized to ensure compatibility across different screen sizes such as mobile devices, tablets, and desktops.
- Important e-commerce functionalities were developed during the internship. A wishlist feature was implemented, allowing users to save their favorite products. Additionally, a shopping cart system was created where users could add products, update quantities, and remove items as needed.

- Business logic features were also implemented, including promotional offers such as Buy One Get One Free and Buy Two Get One Free. A billing system was developed to automatically calculate the total price based on product quantity and applied offers.
- Throughout the development process, regular testing and debugging were performed to ensure that all features were working correctly. Errors and bugs were identified and fixed, and the code was optimized for better performance and efficiency.
- Finally, the project was reviewed and finalized by ensuring that all functionalities were properly implemented and the user interface was smooth and responsive. The completed React-based web application demonstrated a complete workflow from initial setup to final deployment-ready stru

- During the internship, I gained a strong understanding of modern web development technologies, especially **React.js**. I learned how to build dynamic and interactive user interfaces using component-based architecture, which is widely used in real-world applications.
- I developed a clear understanding of core React concepts such as JSX, functional components, props, state management, and React Hooks. These concepts helped me in managing data effectively and building scalable frontend applications.
- The internship enhanced my ability to convert static HTML designs into reusable React components. I learned how to break down complex user interfaces into smaller parts like headers, footers, navigation bars, and product cards, improving code organization and maintainability.
- I learned how to implement client-side routing using **React Router**, which enabled smooth navigation between different pages without reloading the application, improving the user experience.
- The internship helped me understand how to build dynamic user interfaces by rendering data efficiently and handling user interactions. I gained experience in displaying product data, updating UI elements, and managing application state.
- I developed practical knowledge of implementing real-world features such as wishlist functionality and shopping cart systems. This gave me a deeper understanding of how e-commerce applications work.
- I learned how to use browser local storage to store and manage user data, ensuring data persistence even after page reload. This improved my understanding of frontend data handling techniques.

- my logical thinking and problem-solving skills.
- I improved my knowledge of responsive web design by creating layouts that adapt to different screen sizes such as mobile devices, tablets, and desktops using modern CSS techniques.
- I gained experience in debugging and testing applications by identifying errors, fixing bugs, and optimizing performance. This improved the overall quality and efficiency of my code.

7. Challenges and Solutions

During the internship period as a **Frontend React Developer**, several challenges were faced while learning new technologies and developing applications. These challenges helped in improving technical knowledge and problem-solving skills. The major challenges and their solutions are described below.

1. Understanding the Template Structure

Challenge:

Initially, it was difficult to understand the structure of the Coza Store HTML template because it contained many CSS files, JavaScript files, and complex UI sections.

Solution:

The template files were studied carefully and different sections such as header, product cards, and footer were analyzed separately. This helped in understanding how the template was organized and how it could be converted into React components.

2. Converting Static HTML into React Components

Challenge:

Transforming a large static HTML template into reusable React components required proper planning and component separation.

Solution:

The template was divided into smaller sections and converted into reusable components such as Header, Footer, Navigation Bar, and Product Card. This made the code more organized and easier to maintain.

3. Implementing Page Navigation

Challenge:

Managing navigation between different pages without reloading the website was initially challenging.

Solution:

React Router was implemented to create routes for pages like Home, Shop, Cart, and Wishlist, enabling smooth navigation within the application.

4. Managing Cart and Wishlist Data

Challenge:

Storing and managing user-selected products in the cart and wishlist required a method to maintain data even after refreshing the page.

Solution:

Local Storage was used to store cart and wishlist items so that the data remains available even after page reload.

5. Implementing Offer Logic

Challenge:

Developing business logic for offers such as Buy One Get One Free and Buy Two Get One Free required correct calculation of product quantities and prices.

Solution:

Custom logic was implemented in the cart calculation system to automatically apply the offers and update the total billing amount.

6. Ensuring Responsive Design

Challenge:

Making the website layout work properly on different devices such as desktops, tablets, and mobile screens was challenging.

Solution:

Responsive design techniques and flexible layouts were applied using CSS to ensure that the interface adapts to different screen sizes.

7. Debugging and Fixing UI Issues

Challenge:

During development, some UI components and features did not work as expected.

Solution:

Regular testing and debugging were performed, and the code was optimized to fix errors and improve the performance of the application.

8. Weekly Summary

Week	Duration	Hours	Work Done
Week 1	05/12/2025 – 12/12/2025	24 Hours	Reviewed HTML, CSS, and JavaScript files used in the template. Installed development tools including Node.js, npm, and VS Code. Set up the React.js development environment and created a new React project. Organized the project folder structure, imported template CSS and assets, and planned the component-based architecture for converting the template into React components.
Week 2	15/12/2025 – 20/12/2025	24 Hours	Implemented React Router for navigation and created table For Form And Perform Curd, using React components and integrated template styles and design elements. Organized the project structure and implemented basic responsive UI design.

Week	Duration	Hours	Work Done
Week 3	22/12/2025 – 27/12/2025	16 Hours	Create Product Card components and Perform Crud using RTK Query in implemented product And add grid layout. Added hover effects and UI animations to improve the user interface. Implemented responsive design to support different screen sizes and improved the overall UI structure and userexperience.
Week 4	29/12/2025 – 03/01/2026	24 Hours	Implemented Wishlist functionality using Local Storage to store favorite products(LMS). Developed Shopping Cart functionality including Add to Cart feature, product quantity management, and item removal. And Add switch in Admin panel for Product is Active or DeActive that after show in Application. Developed promotional offer logic such as Buy One Get One Free and Buy Two Get One Free and integrated billing calculations based on cart items.
Week 5	05/10/2026 – 10/01/2026	24 Hours	Completed the full React Routing The and It Applied on LMS(Live Project).Improved UI animations and transitions across pages. Tested features including wishlist functionality.Fixed bugs and UI issues, optimized project code and component structure, and

INTERNSHIP REPORT

Week	Duration	Hours	Work Done
			performed final testing and review of the application.
Week 6	12/01/2026 – 17/01/2026	24 Hours	structure imported Redux-Tool-kit ,Learn Global State Manegement And Understand Redux Architecture and Also Learn Concept of Store UnderStood , how to update Manually Using RTK Query.

9. Conclusion

The internship provided valuable practical experience in **modern web development using React.js**. During the internship period, a React-based e-commerce web application was developed by converting the Coza Store HTML template into a dynamic and interactive website.

Through this internship, important concepts such as **component-based architecture, client-side routing, responsive design, and dynamic UI development** were learned and applied in a real project. Various e-commerce functionalities including **product listing, wishlist management, shopping cart system, and promotional offer logic** were successfully implemented.

The internship also helped in improving **problem-solving, debugging, and code optimization skills** while working on different features of the project. By the end of the internship, a complete and functional React-based e-commerce application was developed and tested.

Overall, the internship was a valuable learning experience that enhanced both **technical knowledge and practical development skills**, and provided a better understanding of how real-world web applications are designed and developed using modern frontend technologies.
